The movie's success formula depends on 2 parameters: the acting power of the actor (range 0 to 10) ₹ Flag question the critic's rating of the movie (range 0 to 10) The movie is a hit if the acting power is excellent (more than 8) or the rating is excellent (more than 8). This holds true except if either the acting power is poor (less than 2) or rating is poor (less than 2), then the movie is a flop. Otherwise the movie is average. Write a program that takes 2 integers: the first integer is the acting power second integer is the critic's rating. You have to print Yes if the movie is a hit, Maybe if the movie is average and No if the movie is flop. Example input: 95 Output: Example input: Example input: Output: Maybe For example: Input Result 9 5 Yes 1 9 No Answer: (penalty regime: 0 %) Input Expected Got
